

Highlighted clades (label colours)

- 1 Distance and alignment-free methods
- 2 Methods for genomic data
- 3 Evaluations with genomic data
- 4 Bayesian methods
- 5 Likelihood and Bayesian evaluations
- 6 Distance theory
- 7 Genome rearrangement theory
- 8 Network methods
- 9 Network theory
- 10 Network distances
- 11 Species tree methods from gene trees
- 12 Supertree and species tree evaluations
- 13 Supertree and species tree theory
- 14 Quartet methods
- 15 Supertree methods for DNA data
- 16 Evaluations under the coalescent
- 17 Forest methods from gene trees
- 18 Forest metrics
- 19 Metaheuristics and heuristic search
- 20 Hill climbing for supertrees
- 21 Morphological data
- 22 Tree distances
- 23 Multi-objective optimisation
